

Winter Construction Planning Checklist

☐ Review your project schedule

- Which phases have minimum temperature requirements?
- Are there opportunities to complete weather-sensitive work before winter?
- Can indoor work be scheduled during periods of extreme cold?
- Have weather contingency days been built into the project timeline?

☐ Protect building materials

☐ Plan for concrete curing

- How concrete will be protected after placement
- What temperatures need to be maintained
- Whether heated enclosures will be necessary
- How long supplemental heat may be required

☐ Keep workers comfortable and safe

- Heated break areas
- Warm drinking water
- Winter PPE requirements
- Snow and ice removal plans
- Adequate jobsite lighting during shorter daylight hours

☐ Prepare equipment for cold weather

☐ Create a weather response plan

- Who monitors weather conditions
- Communication procedures for crews
- Snow removal responsibilities
- Site shutdown procedures
- Material protection protocols
- Restart procedures after severe weather

☐ Secure reliable temporary heat
